Page 2

Q1 said first contact on said first substrate and said second contact on said second substrate.

Please cancel Claims 2 and 3.

Claim 4, line 1, please change "3" to -- 1 --.

Q2 10. (Amended) A high density electrical assembly adapted for use with plural circuit boards aligned in a stacked configuration, said assembly comprising:

a conductor assembly having plural elongate conductors adapted to engage a first electrical contact on a first circuit board on one end and a second electrical contact on a second circuit board on a second end thereof, each conductor having a three-bend hook shape at each end [being adapted] to provide a spring force [and being shaped to provide a spring force] on each end thereof and constrained by a dielectric between the ends thereof and

means for retaining each conductor in abutting contact with at least one of said first or second contacts and thereby effect an electrical connection between said first contact on said first substrate and said second contact on said second substrate.

IN THE DRAWINGS:

Please accept the drawing change requested by the enclosed letter to the Official Draftsman. Specifically, please add the reference numeral -- 130 -- to Fig. 5 as shown in red on the copy of the drawing figure provided with the enclosed letter to the Official Draftsman. Formal drawings will be submitted on receipt of a Notice of Allowability.
